

# WebTrustEngine R50

## One-Page Overview

**Review. Safe-fix. Prepare to publish. Verify live.**

### What is it?

An evidence-first web governance engine that reviews your corporate website across security headers, technical SEO, structured data, accessibility, performance readiness, AI/GEO/AEO readability, privacy and deployment hygiene; applies low-risk fixes safely; and gives a clear plan to verify the effect live. It delivers an evidence package, not just a score.

### R50 — number discipline

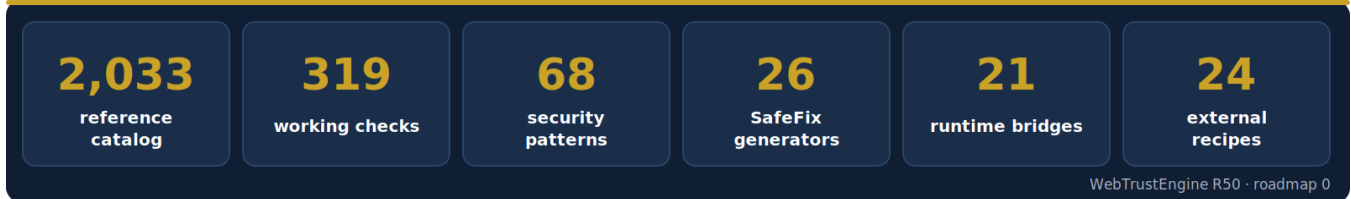

Figure — the R50 number contract: 2,033 is a reference catalog, not automated checks; working checks are 319.

### Four modes

- ▶ Review — evidenced baseline; changes no files
- ▶ SafeFix — low-risk, reversible fixes
- ▶ Build — new static surfaces; publishing is separate
- ▶ Monitor / Deploy-Verify — post-deployment evidence

### What you receive

- ▶ A 10-domain readiness score (before/after)
- ▶ Changed-file list + rollback plan
- ▶ External-action recipes + live verification checklist

### Boundary

Ranking, traffic or AI citation are not guaranteed; evidence, readiness and verifiability are. The security review is static in scope; active penetration testing requires separate authorization and scope.
